

Model 42
Drum Lifting Hook

Heavy-duty drum lifting hook for use on hoist hook or fork mounted hook. Handle open top or tight head, 55-gallon (210 liter) steel drum. Forged steels engage drum rims at opposite ends of drum. A pair of alloy steel lifting rings provides two modes of lifting.

- 1. Horizontal Mode:** Move a horizontal drum. Use lifting ring at the middle of assembly.
- 2. Off-Vertical Mode:** To transfer a drum from upright to horizontal and vice versa. To lift an upright drum, first place the rod-end hook under bottom rim of the drum. Then lift by the ring on the outer end of the alloy chain. As drum leaves the floor, it tilts to off-vertical attitude. You can then lower drum, and guide it to either horizontal or vertical position.

Capacity: 2000 Lb. (907 kg).

NOTE: Each and every Morse model 42 is load tested and factory certified at 200% of rated capacity as per American National Standard ASME B30.9, and a load test certificate is enclosed with each unit.
